DIGEST OF AGRICULTURAL STATISTICS – 2014

FOREWORD

This is the thirty first issue of a regular publication of Statistics Mauritius on agricultural statistics. It contains metadata on agricultural statistics and an overview of the main indicators of the sector.

The digest is published annually and is designed to bring together in a single report as many series as possible on agricultural statistics. It contains information on the sugar, tea, tobacco, food crops, livestock and fisheries sectors. Data showing the pattern of food consumption of the population are given in the yearly "Food Balance Sheets". Agricultural price statistics are shown in the section "Producer Price Index - Agriculture (PPI-A)". All data relate to the Island of Mauritius, unless otherwise specified.

The data published cover in general the five-year period from 2010 to 2014 and are the latest available as at end of August 2015. Some of the figures are provisional and subject to revision in later issues. Figures in this issue supersede those appearing in previous ones. Historical series of main agricultural statistics can also be accessed from Statistics Mauritius website (<http://statsmauritius.govmu.org>).

It is hoped that the data assembled in this digest will meet the needs of users, in particular agricultural policy makers, planners and scientists.

The preparation of this report has necessitated the mobilisation of resources and the cooperation of numerous organizations, both public and private. Their assistance is gratefully acknowledged.

L. F. Cheung Kai Suet

PART I - INTRODUCTION

1. General

All tables in this issue refer to the Island of Mauritius unless otherwise specified. The 1993 Systems of National Accounts (1993 SNA) has been used for the compilation of production accounts. Figures for section 1 (except tables 1.6 & 1.7) and section 6 (except figure 15) pertain to the Republic of Mauritius and have been adjusted to include backyard food crop production.

2. Definitions

2.1 Basic price

The basic price is the amount receivable by the producer exclusive of taxes payable on products and inclusive of subsidies receivable on products. The equivalent for imported products is the c.i.f (cost, insurance and freight) value, that is, the value at the border of the importing country.

2.2 Purchaser's price

Purchaser's price is the amount payable by the purchaser. This includes trade margins realised by wholesalers and retailers as well as transport margins (that is, any transport charges paid separately by the purchaser) and non-deductible VAT.

3. Technical Notes

3.1 Rounding of figures

It is to be noted that in some tables totals may not add up due to independent rounding of figures.

3.2 Regions (note to Table 2.5)

<u>Regions (Factory Area)</u>	<u>Corresponding districts</u>
North	Port Louis, Pamplemousses and Riviere du Rempart
South	Grand Port and Savanne
East	Moka, Flacq and Part of Plaines Wilhems
West	Black River and Part of Plaines Wilhems

3.3 Symbols and abbreviations

Symbols:

... : Negligible
 — : Nil

Abbreviations:

Rs : Mauritian Rupees
 '000 : Thousand
 No. : Number
 N.A : Not available
 N.Ap : Not applicable
 n.e.s : Not elsewhere specified
 c.i.f : Cost, insurance and freight
 f.o.b : Free on board

3.4 Conversion factors

1 hectare = 2.36922 arpents

1 arpent = 100 perches

1 perche = 11 toises

1 inch = 25.4 millimetres

1 tonne = 1,000 kilograms = 0.9842 long ton

1 hectolitre = 100 litres

To convert degrees Celsius (Centigrade) into degrees Fahrenheit multiply by 9/5
 and add 32⁰

Part II – SOURCES AND METHODS

1. Production Account

1.1 Agriculture, forestry and fishing

The activities in this sector are presented in the following sub-groups:

Industrial crops (sugar cane, tea and tobacco)

Food crops, fruits and flowers

Livestock, poultry and related products

Agricultural services

Forestry and hunting

Fishing

Government services

(i) Data sources

Ministry of Agro-Industry and Food Security

Mauritius Cane Industry Authority (MCIA)

Ministry of Ocean Economy, Marine Resources, Shipping, Fisheries and Outer Islands

Mauritius Chamber of Agriculture

Mauritius Sugar Syndicate

Food and Agricultural Research and Extension Institute (FAREI, ex-AREU)

Mauritius Meat Authority (MMA)

Annual Survey of Employment and Earnings

Household Budget Surveys

Agricultural Cost of Production Survey (ACOPS)

Special enquiries from food crop planters, livestock and poultry breeders and providers of agricultural services

(ii) Methodology

Separate production accounts are prepared for each of the sub-groups mentioned above. Apart from sugar and tea, agricultural activities are performed mainly by small planters, breeders and fishermen who do not keep proper records of their transactions. Because of the lack of proper accounts, a variety of methods, based essentially on the commodity flow approach, is used to estimate gross output, intermediate consumption and value added.

(a) ***Industrial crops***

Sugar cane: Details on the sugar industry are given separately in Section 1.2.

Tea and Tobacco: Quantities and prices of tea and tobacco leaves are available from the National Agricultural Products Regulatory Office (NAPRO). Intermediate inputs per hectare are computed based on benchmark ratios from Agricultural Cost of Production Survey (ACOPS) 2005. Total intermediate consumption is then obtained by applying the appropriate rates of inputs to the total area under cultivation.

(b) ***Food crops, fruits and flowers***

Food crops: Since July 1997, monthly data on food crops production and area harvested are obtained from the Food and Agricultural Research and Extension Institute (FAREI), which accounts for about 80% of total production. Estimates of backyard production are made on the basis of consumption data collected through the Household Budget Surveys. Retail prices of about forty food crops and fruits are collected weekly by the Prices unit. This enables the valuation of the output for each product at basic price by deducting transport costs and retail margin from its retail price value.

Intermediate consumption expenditure is then estimated by applying ratios of inputs from Agricultural Cost of Production Survey (ACOPS) 2005. Some of the inputs, for example fertilizers, pesticides, seeds are cross-checked with imports and local production figures.

Fruits and flowers: Monthly production of banana and pineapple and area harvested are obtained from FAREI. As regards other fruits, the number of fruit trees in bearing age is estimated based on the "1985 Fruit Trees Survey" carried out by the Extension Service Division of the Ministry of Agro-Industry and Food Security. Production is first estimated in quantity using an average yield per tree, taking into account the climatic factor. This production is valued at basic prices.

The main source of data for estimating production of flower is exports data from the External Trade unit. A separate estimate is worked out for locally sold flowers, based on the number of weddings, deaths, religious ceremonies, etc.

(c) ***Livestock, poultry and related products***

The Mauritius Meat Authority (MMA) forwards a monthly return on the number of heads and carcass weight of local/imported cattle, sheep, goats and pigs slaughtered at the Central Abattoir. To these, are added the weight of off-abattoir slaughters estimated from permits issued by the Ministry of Agro-Industry and Food Security. The total quantity multiplied by a weighted average retail price gives the gross output at basic prices (after deducting retail margins and transport costs). Estimates of intermediate expenditure on cattle feeds, salt and water etc. are made and deducted from the gross output to obtain value added.

Poultry and egg production are calculated from data obtained through the questionnaires sent to all large producers. These data are supplemented with estimates made for small breeders. Estimates of backyard production are based on the number of broilers sold by the large establishments and on the quantity of feeds sold.

Estimates of milk production are obtained from the Animal Production Division of the Ministry of Agro-Industry and Food Security.

(d) Government Services

Total output is valued as the sum of production costs and is estimated as follows:

Gross output = Intermediate Consumption
+ Compensation of employees
+ Consumption of fixed capital

The government accounts are prepared by the Accountant General's Department. The expenditure items in the recurrent budget are carefully scrutinised and classified in categories such as compensation of employees, intermediate consumption, capital expenditure, transfers, etc. Likewise, items of expenditure in the capital budget are examined and classified under capital formation, intermediate consumption, capital transfer, etc. For other units, data are extracted from their financial accounts.

(e) Forestry and hunting

Estimates of forestry production namely, wood processed by sawmills and, to a lesser extent, firewood is made on the basis of information obtained from the Forestry Service of the Ministry of Agro-Industry and Food Security.

Hunting, mainly deer hunting, is undertaken during a specific period of the year. The associations of hunters provide data on the production of venison. This is valued at basic prices as for other livestock.

Intermediate costs for both forestry and hunting are negligible so that the gross output is composed essentially of value added.

(f) Fishing

The Ministry of Ocean Economy, Marine Resources, Shipping, Fisheries and Outer Islands provides data on the quantity of fish caught. Separate figures are given in respect of lagoon and bank fishing. These are then valued at market prices available from the Prices unit. The transport and retail margins are estimated and deducted from the market price value to give gross output at basic prices. Intermediate inputs for lagoon fishing is very low as the fishermen who are engaged in fishing in coastal waters, use artisanal methods and the catch is usually sold fresh. Bank fishing involves higher costs as the fish are caught in high seas in larger vessels. Also, these fish are sold frozen.

1.2 The Sugar Industry

There are three categories of growers in the sugar industry, namely “miller”, “metayer” and “owner” planters. Millers are owners of sugar factors and large plots of land around these factories. Metayers are normally employees of the millers who are allowed to grow sugarcane on their lands.

Value added generated by the sugar industry is attributed, for national accounting purposes, to the following industrial activity groups:

Agriculture: the final product is sugarcane. Both millers and planters are engaged in its production.

Manufacturing: the final product is sugar and its by-products, molasses, scums and electricity, which excludes Independent Power Producers (IPPs). Only millers are engaged in this activity.

Transport: includes only the millers’ own account transport of sugarcane, sugar and other inputs

Distribution: includes activities of brokers, shippers and the Mauritius Sugar Syndicate:

(i) *Methodology*

The period from the growing stage up to the marketing of all sugar produced covers eighteen months. Production is valued on an accrual basis, so that output relating to crop year, say 2013/2014 is treated as production for calendar year 2013. The sugar cane crop of a given year normally extends from July to June of the following year.

Sugar is marketed solely through the Mauritius Sugar Syndicate. This agency provides data on value and price of sugar, both local sales and exports’ proceeds. All the expenses incurred in respect of marketing are also given.

Production accounts are compiled using information from surveys and other data made available by different organisations.

(ii) *Production Account of Sugar Cane*

Separate accounts are prepared in respect of millers and planters.

The gross proceeds from the sales of sugar and its by-products are obtained from the Mauritius Sugar Syndicate. The gross output of sugar cane comprises 78% of the gross proceeds as the remaining 22% accrue to millers to cover the milling cost.

Intermediate expenses in respect of sugarcane cultivation owned by millers are compiled from annual surveys of selected establishments.

Manufacturing: The end product is sugar and only millers are engaged in its production. The gross output is worked out from the gross proceeds of sugar. The main item under goods consumed is sugarcane; other inputs include milling cost and marketing expenses which are obtained from the Mauritius Chamber of Agriculture, the Mauritius Sugar Syndicate and the survey of sugar factories.

Transport: The sugar estates and millers provide their own means of transport. Most of their canes,

sugar and other inputs are transported by their own lorries. The 'Transport' activity is valued at cost. The expenditure incurred in respect of purchases of materials and services, compensation of employees and consumption of fixed capital are obtained from surveys. The total of these aggregates gives the gross output. Transport cost is then imputed, on a pro-rata basis, to the intermediate consumption expenditure of the agriculture and manufacturing sectors.

Distribution: The gross output is computed from the related expenditure items as given in the Mauritius Sugar Syndicate report. The cost component consists mainly of elements of value added.

PART III – STATISTICAL TABLES AND ANALYSIS

1. Overview of main agricultural statistics – 2014

1.1 Value added of agriculture

Value added at current basic prices of the agricultural sector was Rs 10,308 million in 2014, representing a drop of 0.9% compared to the 2013 figure of Rs 10,405 million. In real terms, it grew by 3.9%. This is explained by the combined effect of a contraction of 1.7% in “sugar cane” and an increase of 6.5% in “other agriculture”. (Tables 1.1 & 1.5)

1.2 Share of agriculture in GDP

The share of agriculture to GDP was 3.0% in 2014, lower than the figure of 3.2% in 2013. (Table 1.1)

In 2013, the share of the sugar industry in GDP was 1.8%.

1.3 Employment in agriculture

Employment in agriculture increased by 1.6% from 44,200 in 2013 to 44,900 in 2014. Employment in large establishments decreased by 0.7 % from 14,100 in 2013 to 14,000 in 2014. On the other hand, employment in other than large establishments increased by 2.7% to reach 30,900 in 2014 compared to 30,100 in 2013. (Table 1.11)

It is to be noted that the “Voluntary Retirement Scheme” in the Sugar Industry started in 2001 following the enactment of SIE Act No.21 of 2001. In 2007, following agreement reached between Mauritius Sugar Producers Association (MSPA) and the Government, the “VRS” (Voluntary Retirement Scheme) and “ERS” (Early Retirement Scheme) were implemented as per the SIE Act amended No.3 of March 2007. As at December 2014, the revised figures on the number of employees who have terminated their contract of employment after the period 2007 was 6,628 for VRS and 210 for ERS.

1.4 Sugar cane

Figures refer to the crop year, starting in July of the reference year up to June of the following year. Sugar cane fields are classified according to agro-climatic conditions in the following four regions: North, South, East and West.

The area under sugar cane cultivation in 2014 was 57,081 hectares, which was 1.2% higher than the 56,391 hectares in 2013. (Table 2.3)

An area of 50,694 hectares under sugar cane was harvested in 2014 as compared to 53,464 hectares in 2013, showing a reduction of 5.2%. (Table 2.4)

The cane yield per hectare for the whole island went up by 11.8% from 71.4 tonnes in 2013 to 79.8 tonnes in 2014. This was due to increases of +14.6%, +7.9%, +16.7% and +0.4% in cane yield in the North, South, East and West respectively. (Tables 2.4 and 2.5)

The production of cane increased by 6.0%, from 3,815,782 tonnes in 2013 to 4,044,422 tonnes in 2014. The average extraction rate in 2014 was 9.91% compared to 10.62% in 2013, representing a decrease of 6.7%. (Tables 2.5 and 2.9)

The production of sugar was 400,173 tonnes, that is, 1.1% lower than the figure of 404,713 tonnes in 2013. Around 415,000 tonnes were exported for a total value of Rs 7,164 million, representing a drop of 21.6% over the 2013 proceeds. (Tables 2.9 and 2.12)

Some 138,441 tonnes of molasses were produced in 2014 compared to 126,601 tonnes in the previous year, representing a rise of 9.4%. The production of scum decreased by 1.7% from 148,235 tonnes in 2013 to 145,692 tonnes in 2014. (Table 2.9)

The average ex-syndicate price of sugar per tonne for 2014 was Rs 12,000 compared to Rs 15,830 in 2013, representing a drop of 24.2%. (Table 2.14)

1.5 Tea

The area under tea cultivation in 2014 was 672 hectares same as in 2013. (Table 3.1)

Production of green tea leaves went down by 4.7% from 7,981 tonnes in 2013 to 7,607 tonnes in 2014. The production of black tea decreased by 3.8% from 1,563 tonnes in 2013 to 1,504 tonnes in 2014. (Tables 3.3 and 3.4)

The quantity of tea exported decreased by 22.4% from 66.9 tonnes in 2013 to 51.9 tonnes in 2014, and the earnings from the export of tea decreased by 15.4% from Rs 15.6 million to Rs 13.2 million. (Tables 3.5 and 3.6)

1.6 Tobacco

There was no production of tobacco leaves in 2014 compared to only 1 tonne in 2013. (Table 3.7)

1.7 Food crops

The area under food crops harvested increased by 3.3% from 8,189 hectares in 2013 to 8,459 hectares in 2014. However, the production of food crops decreased by 3.5% from 118,121 tonnes to 113,957 tonnes in 2014, mainly explained by the combined effects of unfavourable climatic conditions and decreases of 23.9% and 32.4% in the production of onion and pineapple respectively. During the same period, the other changes were noted in the production of the main food crops: cabbage (-12.0%), calabash (+10.3%), carrot (-10.9%), chouchou (+18.0%), chillies (+12.2%), potato (+18.0%), paddy rice (+83.6%), pumpkin (-17.6%), and banana (-13.2%). (Table 4.1)

1.8 Livestock

Livestock by type as at December 2014 was as follows: cattle (6,041), goat (26,558), sheep (2,722) and pigs (17,511). (Table 5.1)

The production of beef from live cattle increased by 0.5% from 1,946 tonnes in 2013 to 1,956 tonnes in 2014. Beef production from the slaughter of imported cattle increased by 2.2%, from 1,856 tonnes to 1,896 tonnes and local beef production (including live cattle from Rodrigues), which represented only 3.1% of total beef production, decreased by 33.3% from 90 tonnes to 60 tonnes. (Table 5.3)

In 2014, the production of goat meat and mutton was 45 tonnes, 2.2% lower than the 2013 figure of 46 tonnes. The share of local production, inclusive of imports from Rodrigues, was 72.6%. (Table 5.3)

Production of pork decreased by 9.4% from 615 tonnes in 2013 to 557 tonnes in 2014. (Table 5.3)

1.9 Poultry

The production of poultry went up by 1.7% from 46,700 tonnes in 2013 to 47,500 tonnes in 2014. (Table 1.7)

1.10 Fish

In 2014, total fish production was 12,351 tonnes, representing a rise of 113.1% over the previous year (5,795 tonnes). Fresh coastal fish catch was 1,409 tonnes in 2014 compared to 1,749 tonnes in 2013, representing a decrease of 19.4%. Other catch (tuna, bank, ponds and barachois etc) increased by 170.4% from 4,046 tonnes in 2013 to 10,942 tonnes in 2014. (Table 5.4)

1.11 Producer Price Index-Agriculture (PPI-A), (Base period: year 2007 = 100)

The PPI-A measures the average change in the selling prices which producers receive for agricultural products. In 2014, the index stood at 103.7, representing a decrease of 8.0% over 2013. During the year, the producer prices of sugar cane, fresh vegetables and animals and animal products decreased by 14.6%, 7.3% and 0.1% respectively. The following increases in price were registered: onion (+4.9%), cattle (+3.6%), goats (+5.1%) and eggs (+1.6%) (Table 7.2). Comparative monthly indices for the agricultural sector are given in table 7.4.

SUMMARY TABLES

AGRICULTURAL SECTOR

FOOD BALANCE SHEETS

Food Balance Sheets

General Notes

1. **Methodology:** Prior to 2004, the methodology for the preparation of the food balance sheets was based on the “Handbook of Food Balance Sheets of FAO, 1949”. From 2004 onwards, the “Handbook of Food Balance Sheets of FAO, 2001”, latest version, has been used.
2. **Coverage:** As from 2006, data relate to the residents of the Republic of Mauritius (Islands of Mauritius and Rodrigues). Prior to 2006, data covered the Island of Mauritius only.
3. **Further disaggregates:** Some of the items have been further disaggregated owing to their high calorific values.
4. The column “Manufacture” previously appearing under the heading “Domestic Utilisation” has been renamed as “Food manufacture”. A new column “Other Uses” has been added. Included under this heading are: quantities mainly consumed by tourists and victuals. These items were previously included in “Exports”.
5. Quantity is in tonnes unless otherwise specified.
6. Estimated changes in stock:

A negative sign (-) against “stocks” denotes decrease in supply; the absence of a sign signifies increase in supply.
7. Data on production of food crops used for the computation of Food Balance Sheets include backyard production.
8. Production of meat includes local and imported live animals slaughtered in Mauritius and Rodrigues. Off-abattoir slaughters are also included.
9. Data on fish and crustaceans are given in terms of wet-weight equivalent.

PRODUCER PRICE INDEX

PRODUCER PRICE INDEX - AGRICULTURE (PPI-A)

Methodology for the construction of the PPI-A

Scope

The PPI-A covers agricultural products that are classified according to the latest Central Product Classification (CPC) Ver.2.1. There are two divisions: Division 01 – Crop Products and Division 02 – Animals & Animal Products. “Crop Products” is further divided into 7 Commodity Groups namely:

- Group 012: Fresh vegetables
- Group 013: Fruit and nuts
- Group 014: Oilseeds and oleaginous fruits
- Group 015: Edible roots and tubers
- Group 016: Stimulant and spice
- Group 018: Sugar cane
- Group 019: Flowers, ornamental plants

Weighting scheme

The weights are derived by multiplying the average of production during 2006, 2007 and 2008 by the average of unit prices in 2007, the reference period. The weight is assigned to each commodity group on the basis of total production (as a proxy for sales) pertaining to the particular group. At commodity level, the weights are apportioned within the commodity group on the basis of production of each product.

Quarterly and annual indices have been computed using a weighting system based on the production value for the base period.

Price collection

In principle, prices collected should refer to farm-gate prices, but it is extremely difficult to obtain such prices for vegetables, not only because of the enormous resources to be mobilised but also because of the unavailability of a list of planters. Hence, in lieu of the farm-gate price, the wholesale price of the produce is recorded at the two auction markets (Vacoas and Port-Louis) every second and fourth week of a month.

In the case of commodities for which prices are fairly stable, data suppliers are visited on a quarterly basis, but prices are collected for each month of the quarter.

Prices of the main commercial crops like sugarcane, tea leaf and tobacco leaf, which are normally fixed for the crop year, are supplied by the respective marketing agencies.

Conversion factors

<u>Vegetable</u>	<u>Average weight per unit (kg)</u>
Beet	0.3
Cabbage	1.09
Cauliflower	1.04
Cucumber	0.4
Leek	0.12
Lettuce	0.15
Petsai	1.2
Squash	0.3
Sweet pepper	0.2
<u>Fruit</u>	
Banana	0.125
Litchi	0.025
Mango	0.15
Mandarine	0.1
Pineapple	0.5
Watermelon	1.5
Coconut	0.5
<u>Poultry product</u>	
Egg	0.055

Index calculation

The PPI-A is calculated according to a modified Laspeyres formula:

$$I_t = \frac{\sum W_i (P_{ti}/P_{oi})}{\sum W_i} \times 100$$

where :

I_t is the index for the current period t

P_{ti} is the price of commodity i in the current period t

P_{oi} is the price of the commodity i in the reference period o (2007)

W_i is the weight associated with commodity i

Monthly Producer Price Index -Agriculture (PPI-A)

(Base period: Year 2007 =100)

Glossary

Virgin crop: The first crop, from newly planted cane.

Ratoon crop: Cane crop grown from the stools of old cane, instead of from freshly planted cane seedlings.

Grande saison: A cane planting crop cycle with harvest in September to November, and replanting in March. The first crop is harvested after 16-17 months in the following year.

Petite saison: A cane planting crop cycle in which cane is harvested early (June – August) and the land is replanted immediately. The first crop is harvested after 12 months the following year.

Polarisation: Degree of polarisation of sugar, which indicates its purity

Interline: Growing of non-cane crops between cane furrows

Molasses: Final residue remaining after centrifuges and crystallization

Cess: A levy on sugar produced per crop year

Flue-cured: Tobacco leaves which are cured in barns using heat at a temperature of about 70⁰ C

Live weight: The weight taken immediately before slaughter

Carcass weight: Weight of the carcass after removal of the following parts (hide or skin, head, fore feet, hind feet, large blood vessels, offal and tail)

Wet weight: The actual ex-water weight of the catch at the time of capture for primary fish.

Per capita consumption (per caput): The per caput figure of each commodity is obtained by dividing the figure for food available for human consumption by the total population partaking of it during the reference period.
